Repository: <https://github.com/ittzzzz-ahmed/legacy-calc-2009.git>

1. Introduction

This assignment required refactoring a legacy C++ loan calculator project, organizing it using modern software engineering practices, adding documentation, unit tests, and maintaining a GitHub repository with proper commits

The original project contained:

- Mixed UI and business logic
- Hardcoded values
- No testing
- No documentation
- Outdated Qt dependencies
- Poor structure

2. Repository Setup

Steps followed:

1. Forked the starter repository on GitHub and named it legacy-calc-2009.
2. Added a .gitignore file to exclude build artifacts
3. Created a dev branch to commit development work.
4. Cloned the fork locally and configured Git.

3. Code Refactoring

The refactoring focused fixing bugs, improving safety, and reorganizing structure.

3.1 New Project Structure

```
Muhammed Ahmad@Ahmed-PC MINGW64 ~/Desktop/legacy-calc-2009 (dev)
$ ls
Doxyfile.unknown  README  config.txt  src/  test/
```

```
Muhammed Ahmad@Ahmed-PC MINGW64 ~/Desktop/legacy-calc-2009/src (dev)
$ ls
Loan.cpp  Loan.h  main.cpp
```

3.2 Fixes and Improvements

Removed Qt dependency

Legacy UI files LoanCalcQtMainWindow.cpp, .h, .pro were removed.

Replaced hardcoded values

Introduced **config.txt**:

default_amount=100000

default_interest=10

default_years=5

Introduced input validation

Invalid cases (negative amount, zero years, negative interest) now return false.

Safer data types

Used long double to avoid overflow in EMI calculation.

Bug Fixes

- Fixed overflow risk in pow()

- Fixed EMI formula
- Ensured correct output formatting

4. Build and Run

The program reads configuration values from config.txt that we made to neglect hardcoded values.

Prompts the user to enter the loan amount, interest rate, and tenure

Validates all inputs

Displays:

1. Monthly EMI
2. Total payment
3. Total interest

```
Muhammed Ahmad@Ahmed-PC MINGW64 ~/Desktop/legacy-calc-2009 (dev)
$ g++ -std=c++17 src/Loan.cpp src/main.cpp -o loan.exe

Muhammed Ahmad@Ahmed-PC MINGW64 ~/Desktop/legacy-calc-2009 (dev)
$

Muhammed Ahmad@Ahmed-PC MINGW64 ~/Desktop/legacy-calc-2009 (dev)
$ ^[[200~/loan.exe
bash: ./loan.exe: No such file or directory

Muhammed Ahmad@Ahmed-PC MINGW64 ~/Desktop/legacy-calc-2009 (dev)
$ ./loan.exe
Enter the loan amount: 100000

Enter the interest rate: 8

The number of years: 6

Total amount to be paid: 648000
Total interest: 48000
Monthly amount to be paid: 9000
```

5. Unit Testing (GoogleTest)

Unit tests were added to verify EMI calculations and input validation.

Tests Included

1. NormalEmiCalculation – verifies EMI formula
2. InvalidInputHandling – rejects invalid input
3. LargeTenureNoOverflow – ensures no overflow on long durations

Test Output

PASSED 3 tests

```
